TECH TUESDAY

[tips and tricks everyone should know]

Tip of the day: Why choose an ANDROID Phone (PART 2)

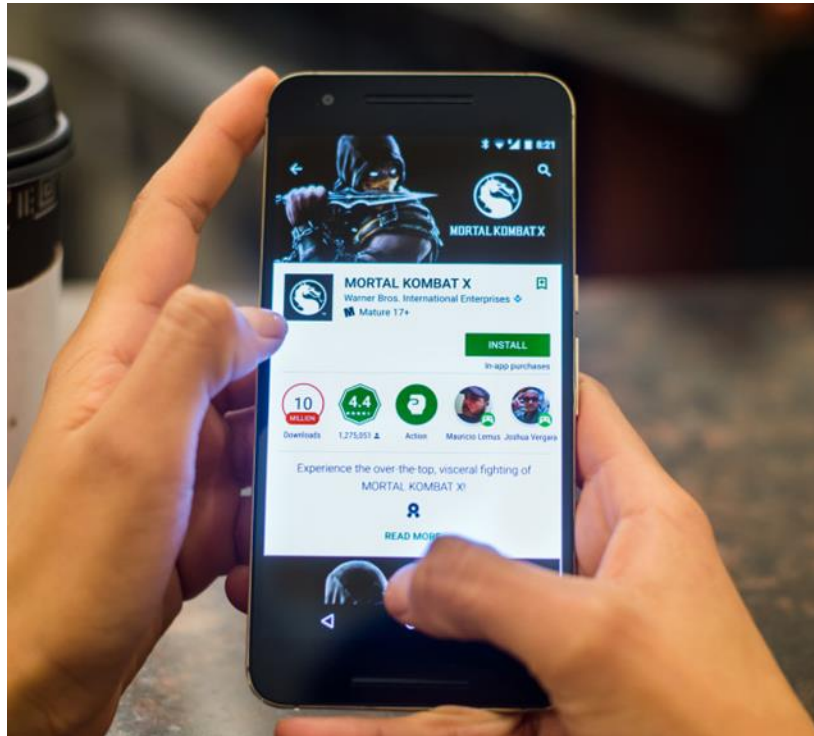

3. You Can Use Custom ROMs

Android is open-source, so the tech community has a lot more freedom and flexibility when it comes to tweaking it for your device. It's your phone, and you can do whatever you want with it. Android equivalent of jailbreaking is called "rooting" and you can also install customized operating systems on your device (known as custom ROMs). Android manufacturers don't go out of their way to make this extra difficult some even help you do it.

4. More Free Games and Apps

It may be a double-edged sword, but you can't escape the fact that there are more free apps and games on Android than there are on iOS. Sometimes ports of the same apps that carried a price tag on iOS are free on Android. There also seems to be a greater willingness to pursue the freemium or ad-supported model.
